

How To Read Your Scans

Your **brain** and **nervous system** control and coordinate **ALL** functions and organs in your body. Interference to your nervous system from **Subluxations** has an effect on your body's ability to function normally. **Doctors of Chiropractic** are the **only** professionals trained at the detection and correction of vertebral subluxations.

Subluxations can be detected and monitored in several ways. One of the most advanced ways of monitoring subluxations is by using a **"Subluxation Station"** designed to scan the body for the effects of subluxations. Two of the most common scans are those done to measure heat along the spine, (**Thermal Scan**), and those used to measure surface electricity from muscle tone, (**Surface EMG**).

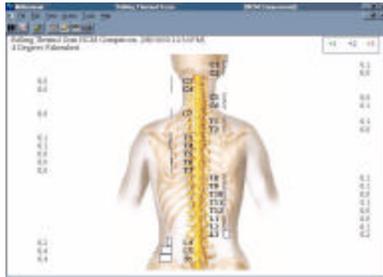

On the print-out of each scan there is a color code that illustrates the variations in readings. This color code helps differentiate between mild, moderate and severe. Read below to compare normal scans with those effected by subluxations.

Normal Scans

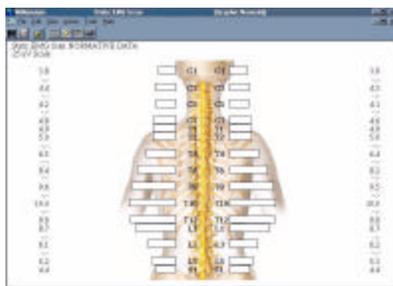

Scan Explanations

Scans with Subluxations

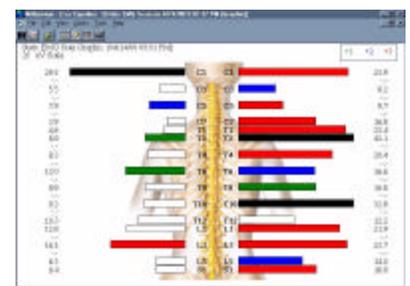

Thermal Scan

The Thermal Scan measures heat along the spine. When subluxations are present there can be a change in heat from one level to the next as well as a change from one side to the other. Subluxations will cause changes in heat by causing changes in blood supply along the spine. As care progresses our goal is to return this reading to normal.

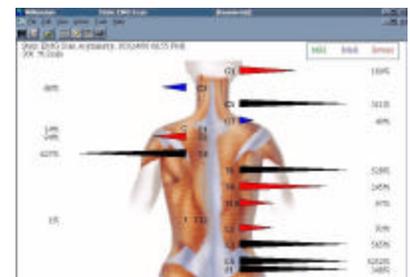

Surface EMG Scan

This scan lets you see the actual levels of surface electricity and the variations from one level to the next. Subluxations cause changes in muscle tone that are show up on this scan as changes in surface electricity. The color code shows the amount of variation from normal for each level and therefore the effect of subluxations on the muscular system.

Surface EMG Symmetry Scan

In addition to the amount surface electricity shown by the reading above, the symmetry of one-side compared to the other is also important. A variation from one side to the other is a clear indication that subluxations are having an effect on your muscular system. Normal levels and symmetry are the goals for this reading.

Nothing is more important to your health and well being then a properly functioning nervous system. **Chiropractic** care is focused on correcting subluxations that interfere with your nervous system and your **innate potential** to be healthy. Performing these scans **regularly** throughout your care is the best way to ensure that we are correcting your subluxations and returning proper function to your nervous system. **Your health depends on it!**

You can make a difference in someone's life when you tell them about chiropractic!
